SurgAR is looking for a Clinical Research Manager

Looking for an ultra-stimulating ground to start your career? Looking for a challenge that can have a direct impact on the quality of patient care ? Send your CV to cecile@surgar-surgery.com

Why join us ?

SurgAR is a growing startup working on the development of augmented reality software for minimally invasive laparoscopic surgery. SurgAR is a 2019 winner of the prestigious i-Lab competition (best innovative company projects) and a 2020 winner of several national and international calls for proposals. It has a strong partnership with an internationally recognized surgery department and a computer vision laboratory leader in its field. SurgAR is based in Clermont-Ferrand where the quality of life excels!

Our software is based on state-of-the-art technology dedicated to improving the safety, efficiency and speed of the operating procedure. Our technology is a deep-tech based on more than 10 years of fundamental and clinical research. On our website you will discover the performance of our technology (www.surgar-surgery.com). More than 40 patients have been operated on using our software. We aspire to create breakthrough technology that will change the practice of surgeons! We are ready for the market but we need your help to get there!

The job offer is a real challenge but you will work at the heart of a small management team in total collaboration with the R&D department and clinicians. We strongly value the ethical aspect of the company and its employees. **We have a mission: come to help us!**

The job?

The main mission of the Clinical Research Manager is to launch and monitor clinical trials in a Good Clinical Practice (GCP) environment; he or she monitors compliance with standards and deadlines throughout each clinical analysis process. He/she then writes the report and publishes the results to the scientific community. Its related missions include assisting the RQM in compiling the risk management file for each software application, as well as drafting responses to national and international calls for projects submitted by the company.

You?

With a Master's degree or higher, ideally with a PhD in life sciences, clinical research, clinical pharmacology, epidemiology or health engineering, you are an expert in clinical research, master GCP, clinical research ethics, patient data confidentiality laws and applicable regulatory requirements; you understand technical, scientific and medical information. You are familiar with the environment of calls for projects, particularly European ones. Regulatory knowledge in risk analysis and risk management would be a plus. You are familiar with or interested in the field of artificial intelligence. You understand the stakes of the development and hyper growth of a startup.

You have a perfect mastery of oral and written technical English.

You are ambitious but humble, open-minded, known for your rigour and reliability, empathetic and caring, always ready to learn : You are the one !

SurgAR is THE startup that will revolutionize tomorrow's surgery!
Be part of this revolution! Join us!
